IDENTIFICATION OF VLBTR OUTSTATION B04C

AT SARY SHAGAN ANTIMISSILE TEST COMPLEX, USSR

Further analysis of 9 April 1960 photography and [redacted] 25X1  
 pertaining to the Sary Shagan area indicates that Instrumentation Site 8  
 (46-54N 70-55E) at the Sary Shagan Antimissile Test Complex contains the  
 Vladimirovka-Lake Balkhash Test Range (VLBTR) outstation designated  
 [redacted] 1/, 2/ In addition, a portion of Instrumentation Site 7 25X1  
 (46-36N 70-50E) contains at least one of the two southern instrumentation  
 points (IPs) [redacted] This 25X1  
 conclusion is based on a comparison of geographic locations and equipment  
 present [redacted] and found on the photography. 25X1

The facilities observed on the photography at Instrumentation Sites 7  
 and 8 appear to be in excess of those [redacted] 25X1  
 even allowing for the fact that [redacted] is the largest of any of the VLBTR 25X1  
 stations. Therefore, some of these facilities are probably associated with  
 Dorokhov's activities at Sary Shagan. However, aside from the SSATC  
 interferometers, it has not yet been determined which facilities at Sites 7  
 and 8 are associated only with Dorokhov. [redacted] 25X1
